

Sustainable Solutions Leipzig expands in 2027 with parallel staging alongside efa:ON and netze:ON

Leipzig, 1 October 2026. *The second edition of Sustainable Solutions Leipzig will build on the platform established in 2025 and bring together companies and industry professionals from the renewable energy and installation sectors at Leipziger Messe. In 2027, the exhibition will take place alongside efa:ON and netze:ON, creating additional opportunities for trade visitors to connect solutions across related areas of the energy industry.*

A strong platform for the renewable energy industry

The former Solar Solutions Leipzig will return for its second edition in 2027 under its new name and refined branding. The exhibition is aimed at installers, planners, wholesalers, project developers and energy suppliers in Saxony and Central Germany.

The focus is on technologies and solutions for generating, storing and using renewable energy, including photovoltaics, intelligent energy storage solutions, charging infrastructure for electric mobility, and sustainable heating and cooling technology.

The first edition of Solar Solutions Leipzig in 2025 brought together 4,081 visitors and 72 exhibitors, providing a strong foundation for the further development of the platform. 41% of visitors came from the electrical installation sector, 22% from other industry sectors, 16% from construction and installation consultancy, 12% from energy generation and supply, and 9% from B2B wholesale.

The visitors' professional roles further demonstrate the exhibition's relevance to the industry: Technical employees accounted for 25% of visitors, managing directors for 22%, and business owners for 20%. With 94% of visitors coming from Germany, the first edition brought together a strong base of industry professionals and decision-makers. Building on this foundation, Sustainable Solutions Leipzig is expanding its platform next year and aims to bring together an even broader network of companies and industry professionals in Leipzig.

Three exhibitions with distinct areas of focus

Sustainable Solutions Leipzig focuses on photovoltaics, energy storage, charging infrastructure and green HVAC. efa:ON is dedicated to electrical, building, lighting and energy technology. netze:ON complements the offering with a sharpened profile focused on smart energy grids and digital infrastructure.

The parallel staging brings together solutions ranging from photovoltaic systems, energy storage, charging infrastructure and heat pumps to electrical installations and grid connections. Trade visitors can combine their visits to the three exhibitions and explore solutions from related fields.

At their 2025 editions, efa:ON and netze:ON welcomed around 11,800 visitors and 210 exhibitors combined. According to Leipziger Messe, 93% of exhibitors rated the professional qualifications of visitors as high. Around 44% of visitors stated that they had significant influence on decisions and procurement within their companies.

“Sustainable Solutions is an ideal addition to our portfolio. In Leipzig, trade visitors will now be able to follow the entire energy supply chain, from sustainable generation and storage through transportation via the grids to its use in buildings,” says Tina Frenzel, Project Director of netze:ON and efa:ON. “With this three-part combination, we are creating a unique platform in the German exhibition market for the energy transition and the transformation of the building sector.”

Exhibitors and innovations

The exhibitor portfolio of Sustainable Solutions Leipzig continues to grow. Companies already registered include FENECON, with energy storage solutions for residential, commercial and industrial applications; autarc, with digital planning tools for photovoltaic projects; HAWO Energie, with inverter and energy storage systems; and TEPTO, a provider of photovoltaic systems, energy storage solutions, inverters and PV complete sets. ENERGY 3000 Solar has also confirmed its participation. Further exhibitors and their products will be announced at a later date.

The Innovation Boulevard features products and services that have been on the market for less than twelve months. An independent jury presents the Best Innovation Award, while the Best Promotion Award is also presented. Trade visitors can discover new developments and speak directly with manufacturers’ representatives.

Moderated seminar programme

The seminar programme at Sustainable Solutions Leipzig covers technological innovations, legal and regulatory frameworks, new business models and market forecasts. It is aimed particularly at installers and planners seeking information on technological developments, connection regulations and economic conditions.

The programme is curated and moderated by Heiko Schwarzburger, editor-in-chief of the trade magazines *photovoltaik* and *pv Europe*, published by Gentner Verlag.

efa:ON and netze:ON also offer an extensive conference programme. In 2027, there will once again be four forums across the exhibition halls focusing on different target groups and key topics, as well as guided tours and net working opportunities.

Regional cooperation with LEE Sachsen and EnergieNetzWerk Mitteldeutschland

Sustainable Solutions Leipzig cooperates with the Saxony Renewable Energy Association (Landesverband Erneuerbare Energien Sachsen e. V., LEE Sachsen) and EnergieNetzWerk Mitteldeutschland e. V. Stephan Rothe, a member of the boards of both associations, contributes to the seminar programme and is available to trade visitors during the exhibition.

Become an exhibitor

Companies wishing to present their solutions at Sustainable Solutions Leipzig can register for a non-binding stand reservation via the exhibition website.

Date and venue

Sustainable Solutions Leipzig
22 and 23 September 2027
Leipziger Messe, Hall 3

efa:ON and netze:ON will take place from 21 to 23 September 2027.

For the press

Journalists can obtain a complimentary press ticket. Logos, images and press releases are available in the press section of the website.

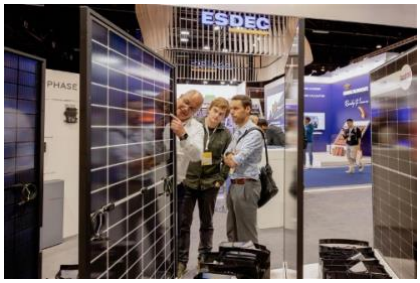

About Sustainable Solutions Leipzig

Sustainable Solutions Leipzig is a B2B exhibition for Solar, Smart Storage, EV Charging and Green HVAC. It is aimed at installers, planners, wholesalers, project developers and energy suppliers in Saxony and Central Germany.

The next edition will take place on 22 and 23 September 2027 in Hall 3 at Leipziger Messe, alongside efa:ON and netze:ON for the first time. The exhibition is part of the European Sustainable Solutions exhibition series, with editions in Düsseldorf, Amsterdam (NL) and Vienna (AT), among others.
